

**The Healthiest Home approach to every project is a three tier process.
Every task required to successfully complete the project
is categorized and measured accordingly.**

IAQ (Indoor Air Quality)

We are the most experienced builders at sourcing and installing integral non-toxic alternatives for traditional interior and exterior building products. We guarantee the use of the least toxic product alternatives available.

Energy Alternatives

On every project we assess, design and install the most feasible energy and water usage alternatives from wind to solar to geothermal based on your site location and your budget.

ECO footprint

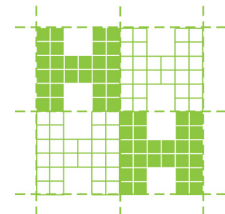

We strive to minimize impact on every project through planned strategies for spatial design, material recycling and re-use and use of sustainably harvested materials.

THE PROCESS

Step one: In-store Initial Consult

We will learn about your project goals & dreams and the budget that you have to achieve them with. What stage are you at? Take us through your dream project scrap book. Where are you at in your design process? Do you have materials and concepts already brewing? What are your project timelines? What is the as-is layout of your space? Review the HH project planning guide.

You will get an in-depth look at The Healthiest Home philosophy and how we *create healthy green spaces*. You will gain an understanding of our health & environmental criteria impacting every aspect of OUR Company and YOUR project. You will experience the benefit of the ONE-Stop-ECO-Shop approach.

Step two: The Home Visit

A more intimate look at your project goals, your space and how we can “Green Your Print”. We will get a sense of your functional needs, your priorities and “must have” features. We will review location and structural elements. We will further discuss your budget and your options. *We design to your budget.* Based on your priorities we will advise on key area worth investing and innovative ways to save. After this meeting – you should have a good sense of us and we will understand your goals. Are we a good fit?

Step Three: Creative Design

Depending on the Kitchen project a \$1000.00 - \$2000.00 deposit is required.

We finalize drawings to your satisfaction. We prepare a complete material specification and selection for all elements of the project scope. The designs are yours. The deposit is credited to your account if overall project is commissioned.

A \$1000.00 deposit includes 40 hours of meeting and design time to complete you project.

Step four: The Plan

Your designs are final. The project has been commissioned. Let’s build a solid plan. The framework for your project includes:

- Detailed scope of work
 - Project timeline
 - Payment plan
- Communication structure.

Step five: Get to work!

Open communication is imperative to a successful completion. Detailed tracking of any extra’s that YOU request on the project. Bi-weekly progress updates to keep us all on the same track. All installation is directed by our HH Project Manager who ensures the HH guarantee of a healthy sustainable project.

Step six: We’re all done!

... Only once we have completed the project to your satisfaction. Presentation of your “*HH Project Pages*”: A memory of the makeover!
